

QA BUG REPORT: #BASKET-QTY-04

Marija Trajković | Professional QA Portfolio

STATUS	APPROVED (uTest)
SEVERITY	LOW (Functional)
OS/DEVICE	Windows 11 Pro / Chrome
PROJECT	Global E-commerce Platform

Summary

Basket subtotal discrepancy: When adding 4 units of a specific product, the basket only charges for 2 units without any stock limitation warning or error message.

Results Analysis

- **EXPECTED RESULT:** The basket should successfully add 4 units and calculate the correct subtotal. If stock is limited, a clear validation message should be displayed.
- **ACTUAL RESULT:** The basket displays "4" units, but the subtotal is calculated for only "2" units. No "Out of stock" or "Stock limitation" warning was triggered.

Steps to Reproduce

1. Navigate to the official e-commerce website.
2. Go to the hair care category and select a premium styling product.
3. Choose quantity "4" from the selection dropdown.
4. Click the "Add to Basket" button.
5. Observe the quantity in the basket popup versus the calculated subtotal price.

Technical Impact

This functional error leads to incorrect price calculations during the checkout process. From a business perspective, it can result in loss of revenue or inventory discrepancies, as the system fails to communicate stock limitations to the user while incorrectly processing the order value.
